Is The Dennerroll Right For You?

The neck should have a natural semi-circular curve called the Cervical Lordosis. Car accidents, falls, and poor posture all contribute to abnormal Cervical Lordosis, which will put us at a greater risk of adverse nerve, ligament, and muscle function. Abnormal Cervical Lordosis may lead to a number of health-related disorders.

The Cervical Dennerroll Orthotic device is a simple yet complex, pillow like device engineered with curves, angles, and ridges. The Dennerroll provides a gentle stretch that assists in the correction of abnormal Cervical Lordosis.

When using the Dennerroll it can assist in relief of pain and muscle tension, as well as enhance patient comfort and improve health.
